```

 $\Gamma$ де n — первая цифра номера по журналу n=1

m – вторая цифра номера по журналу m=1

k – сумма первой и второй цифр номера по журналу k=2

- і разность второй и первой цифр номера по журналу + 2 і=2
- і модуль разности первой и второй цифр номера по журналу і=0
- g отношение первой ко второй цифре номера по журналу и +1 (для 10-го варианта +1 в знаменателе) g=2

Вывод: научились решать систему уравнений, используя матричную форму метода Гаусса с выбором главного элемента по столбцу, решать системы уравнений с помощью оператора LinearSolve, вычислять обратную матрицу и её определитель, решать системы уравнений, использовав обратную матрицу, давать оценку погрешности полученного решения и выполнять LU-разложение матрицы.
